

Final report on the Secondary School project St. Pierre

To begin with, the old roof covered with corrugated iron sheets and the roof truss are removed.

While the roof is still being dismantled, hollow blocks are already being manufactured to raise the walls of the building.

Roof dismantling almost complete

The foundation for the veranda is being laid.

Delivery of teak logs

The pillars for the veranda were cast.

Newly constructed gables - roof elevation

Impression of the construction site

Partition wall with remnants of a blackboard - before renovation

Stripped floor

In the background, the water tower (financed by the Diocese of Munich)

Back side – exterior paintwork complete

The renovated building viewed from the front

The offices of the school administration

To close the project, a photovoltaic system was installed.
